One-time activation

QUICK START GUIDE

Activate a Nano Tag IR

Turn on a new tag before you provision it.

A Nano Tag IR must be activated before use. Activation is one-time. Once the tag is activated (powered on), it **cannot be powered off**. Its battery life, which lasts **about 14 days**, starts immediately. After activation, the tag can be provisioned, meaning it is assigned and distributed to a person.

STEP 1

Hold the Nano Tag IR correctly

Thumb on the front bottom, **index finger on the back**.

STEP 2

Check the front

Front faces you. Keep the **blue LED uncovered** (upper left corner).

STEP 3

Squeeze and hold

Squeeze the Nano Tag IR **firmly for 3 seconds**. It presses the hidden button — you will feel a click.

STEP 4

Activation: watch for blue LED

The blue LED flashes when activation has started. **When it flashes, stop pressing.** The flash confirms the tag's battery is activated.

Blue LED flashes on the front side

Tip: No blue LED flash? Stop pressing and try again. The blue LED only flashes during activation. Once activated, it will not flash on subsequent presses.

Watch the activation video
